

Git/GitHub best practices

GitHub tools

- Commits;
- Branches;
- Pull requests;
- Tags;
- Releases;

Best practices

- Branches - use and abuse;
- Always pull before push your changes;
- Commits should be related to changes;

- Test before your commit;
- COMMIT OFTEN;
- Write good commit messages;
- Don't commit half done work;

- Agree on a workflow (like gitflow);
- If necessary, submit PRs to the other developers to check and test;
- Don't be afraid of merges and conflicts, it always happens;
